DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C.

- I. Claims 1-3, drawn to a method for forming interconnects, classified in class 205, subclass 223.
- II. Claims 4-12, drawn to apparatus for forming interconnects, classified in class 204, subclass 212.
- III. Claims 13-24 and 40-47, drawn to a apparatus for forming interconnects, classified in class 204, subclass 198.
- IV. Claims 25-29, drawn to method for forming interconnects, classified in class 205, subclass 220.
- V. Claims 30-35, drawn to a polishing liquid, classified in class 205, subclass 684.
- VI. Claims 36-39, drawn to a method for polishing a substrate, classified in class 205, subclass 640.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP §

806.05(e)). In this case the process can be practiced by an apparatus, which has means for providing a pulse waveform.

2. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as providing cleaning and annealing of the substrate. See MPEP § 806.05(d).

3. Inventions IV and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to treat the substrate without further cleaning and annealing.

4. Inventions VI and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because because the polishing liquid may have other viscosities than those claimed in the polishing liquid. The subcombination has separate utility such as polishing copper where viscosity is not a factor.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
6. A telephone call was made to Mr Nils Pederson, attorney of record on May 29, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
